4-Color IFS Module

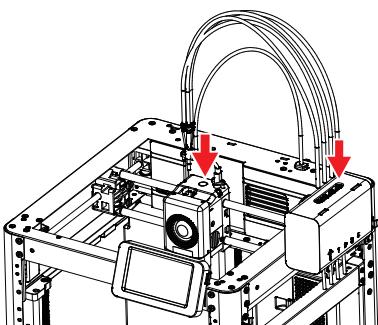

1. Secure the mounting plate to the side of the device using two M3×6 screws.

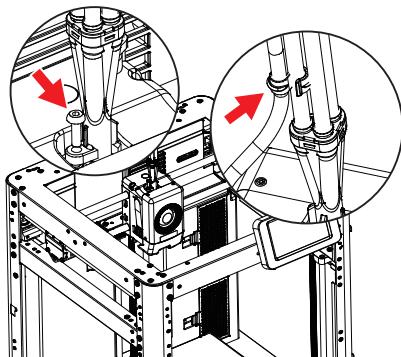

2. Tilt the IFS module at a 45-degree angle against the mounting plate as shown, and then rotate it 45 degrees clockwise to lock it into place. After installation, the four short guide tubes of the IFS module should face downward.

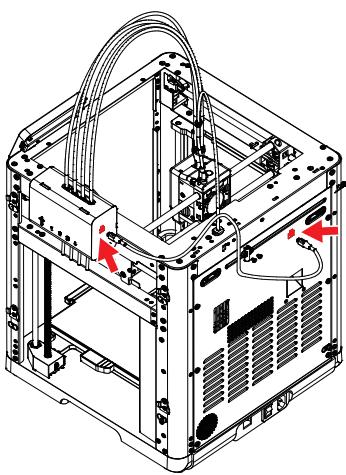

3. Insert the guide tubes into each channel of the IFS module. There's no need to follow a specific order for the channels. Connect the other end to the extruder.

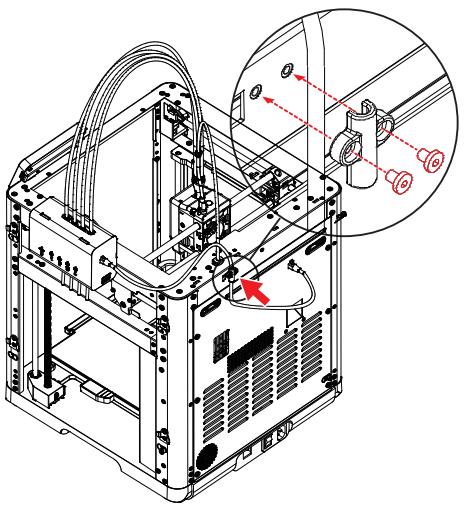

4. Secure the 4-in-1 guide tube with the M3*6 screw. Connect the extruder cable and the guide tube together through the buckle.

5. Connect the IFS cable to the four-color module and the corresponding port on the back of the device.

6. Secure the cable clip with two M3x6 screws.

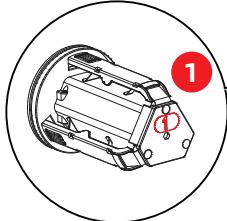

7. Snap the spool holders onto the side mounting clips and press down to secure.

⚠ Note

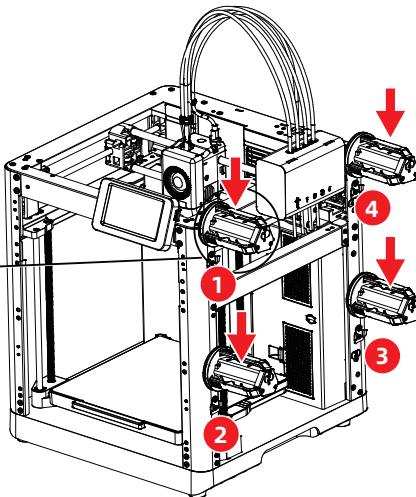

During operation, filaments on both sides have different retraction directions. Therefore, the spool holders must be installed according to their corresponding numbers.

Both the spool holders and the IFS channels should be installed according to the numbered positions shown in the figure.

The spool holders have numbered labels that correspond to the numbers on the printer for proper installation.

The spool holders support spools with an inner hole diameter ranging from 52 to 58 mm.

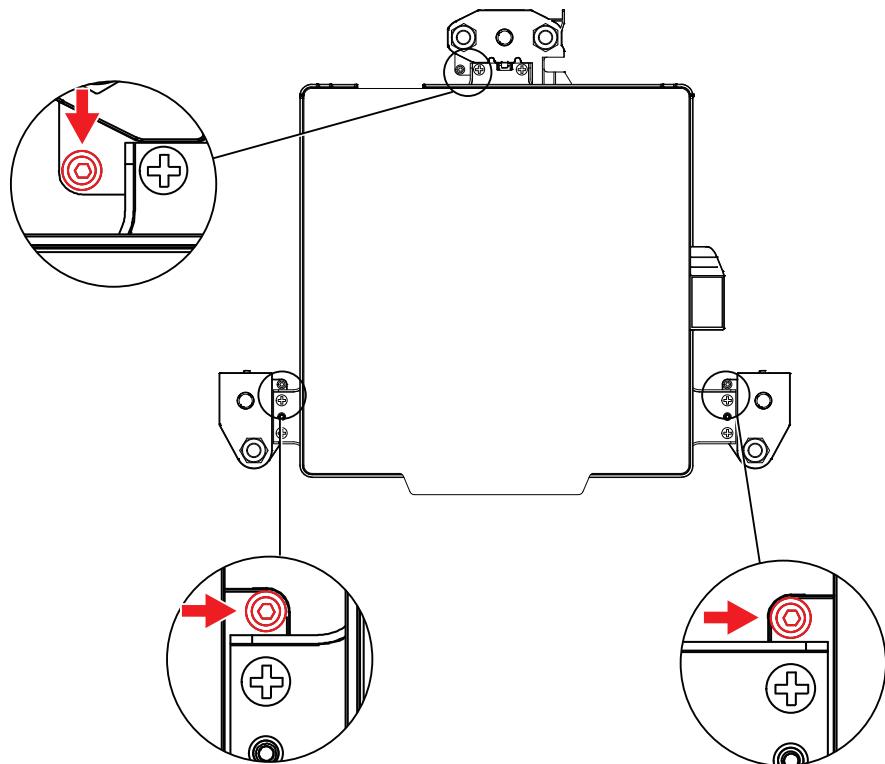

Unlock the Build Plate

⚠ Note

Please ensure the bed has been cleared up!

Please use a 2.5mm Allen wrench to remove the three screws which lock the build plate (as indicated by the arrows).

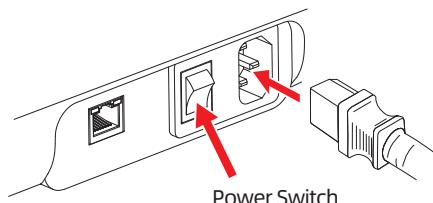

*This is a top-down view.

First Print

* The interface layout may change whenever there is an upgrade of firmware.

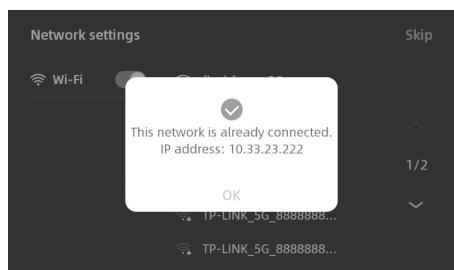

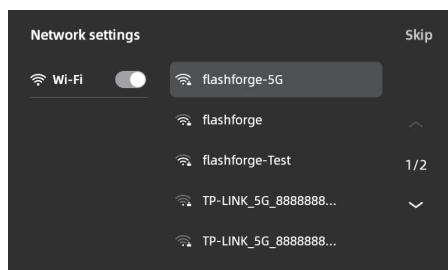

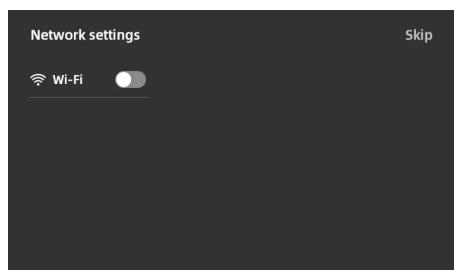

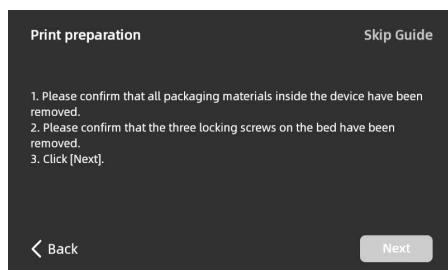

1. Plug in the power cord, turn on the power switch, and wait for the screen to respond.

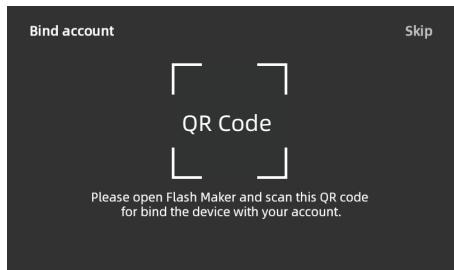

2. Following the guide on the screen, select the language.

3. Turn on the Wi-Fi switch and connect to the network following the instructions. A successful connection notification will pop up once connected.

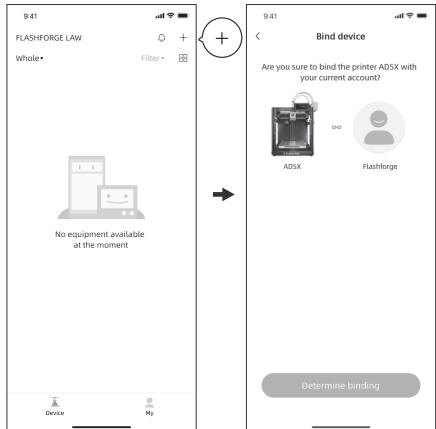

4. Bind the printer following the instructions. (Note: If skipped, binding can still be done later on the printer.)
- After clicking [OK], the QR code page will appear.

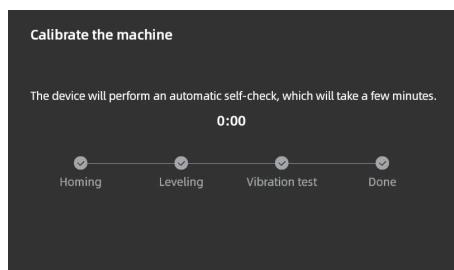

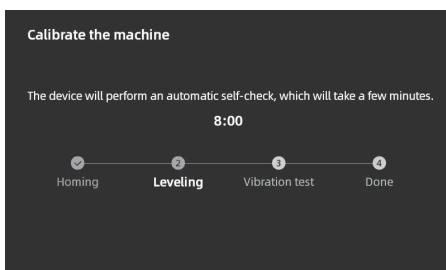

- Download Flash Maker by scanning the QR code (see right) or from the app store, register your Flashforge account, and log in.

- Use Flash Maker to scan the QR code on the printer screen to bind the printer to your account. (Note: Default printer name and location are set upon leaving the factory; after completing the startup, you can customize the printer name and location in the settings.)

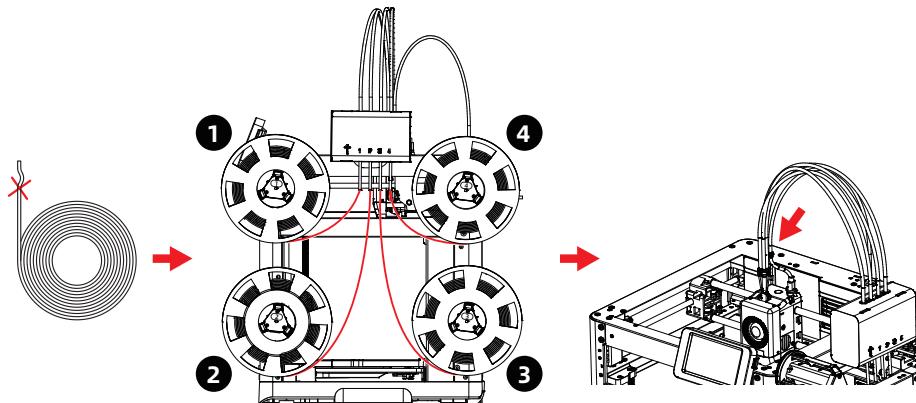

5. Click [Next] and the machine will perform the first calibration. Vibrations and noise during calibration are normal.
(Note: Please keep the machine on a stable surface and do not move it during calibration.)

6. Load filament following the on-screen instructions:

- a. Cut off the bent part of the filament end. Place the filament spools on the spool holders and insert the four filaments into the 1/2/3/4 inlets according to the direction indicated below. Thread them through the feed roller, and the device will automatically detect the filaments and feed them into the guide tubes one by one. The screen will display "Filament auto-loading, please wait..."

(Note: The small spool provided is for testing the first model only. It is recommended to load full spools directly.)

Cut off the bent tip of the filament

The numbers 1, 2, 3, and 4 marked on the four-color module correspond to the filament numbers.

The filaments will automatically be fed to the top of the 4-in-1 guide tube.

- b. Edit filaments: After loading the filaments, select channels 1-4 individually, click [], and select the corresponding filament type and color. For the first use, please select PLA.

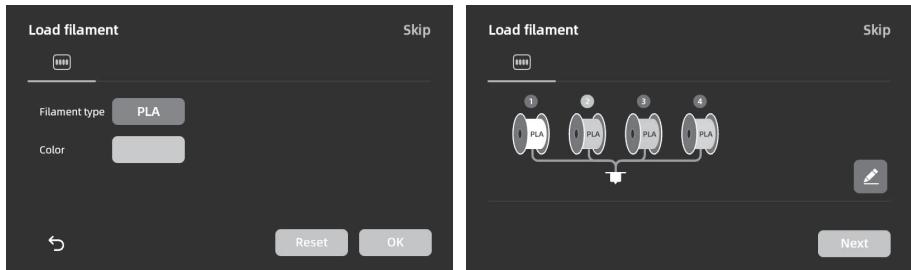

The screenshots show a step-by-step process for filament selection:

- Step 1:** Shows four spools labeled 1, 2, 3, and 4 connected to a single slot at the bottom. A "Tip" message says "Select a slot and edit the filament." A "Skip" button is in the top right.
- Step 2:** Similar to Step 1, but the connection is now split into four separate slots, one for each spool. The "Tip" message remains the same.
- Step 3:** The filament type and color are selected for each spool. The "Filament type" dropdown shows "PLA" and a question mark. The "Color" dropdown shows "?" and a question mark. Buttons for "Reset" and "OK" are at the bottom.
- Step 4:** A detailed selection menu is shown for each spool. It includes options: PLA, ABS, PETG, TPU, PLA-CF, PETG-CF, and SILK. The "OK" button is visible at the bottom right.

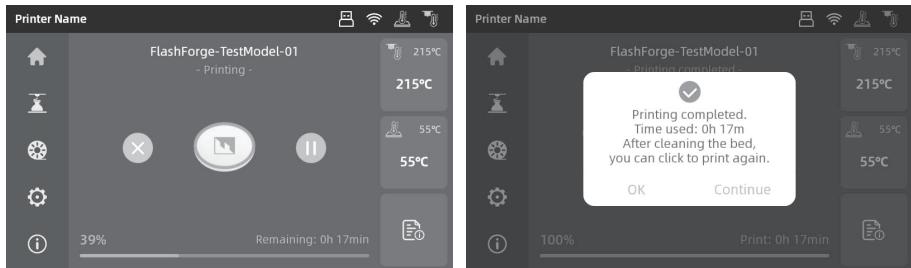

c. You may apply a thin layer of glue to the print bed. Please apply it evenly over the entire surface.

Note: Applying glue helps improve the adhesion.

d. Click [Next], and the device will start printing the built-in file (configured for PLA material).

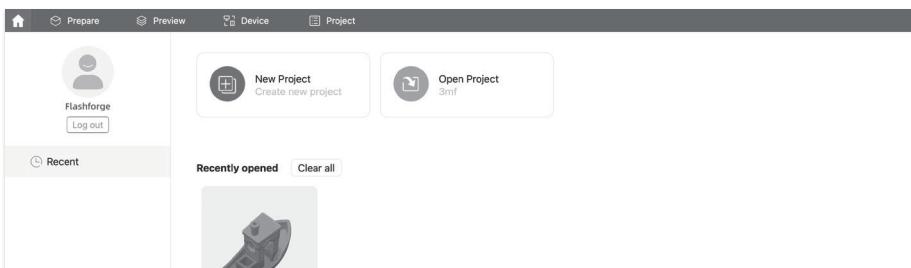

7. After printing is completed, please remove the model and clean the print bed.

Log in to Orca-Flashforge using your Flashforge account. Create a new project or open an existing one. *Orca-Flashforge and Flash Maker share the same account.

First, select the printer as AD5X. If only one filament is shown, please add filaments until you have four before importing your multi-color model. Import your model, slice it, select your printer, and send it to print.

*It is recommended to select bed leveling when sending the print.

Monitor your print progress remotely on the device interface and pause/stop the print if needed.

*You can only see the live view if a camera is installed. (AD5X does not come with a camera by default.)

6. 根据屏幕开机指引完成耗材安装进丝操作：

a. 剪去耗材头部弯折部分，将丝料盘放到耗材支架上，按如图耗材进料方向将4个耗材分别插入1-2-3-4进料口，穿过送丝轮，设备将检测到丝料，并逐个自动送入导管内，屏幕会主动弹出“丝料自动装载中”的提示。

(注：附赠的小卷耗材，仅供测试首个模型使用，建议直接安装整卷耗材)

剪去耗材头部弯折部分

四色模块中所标记的1234序号，即为耗材标号。

丝料会自动被送至四合一导丝管管口上方。

b. 编辑耗材：丝料装载后，分别选中1-4号耗材通道，点击编辑 按钮，选择对应的耗材类型与颜色；首次使用请选择PLA。

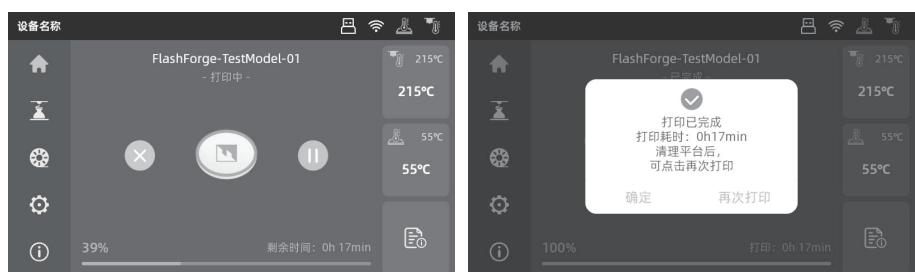

c. 可以在打印平台上涂一层胶水，请全幅面涂抹均匀。注：涂抹胶水有利于改善模型粘附。

d. 点击[下一步]，机器开始首次打印内置文件（该文件的配置参数使用的材料为PLA）。

7. 打印完成后，请取下模型，清理平台。

Orca-Flashforge 切片软件

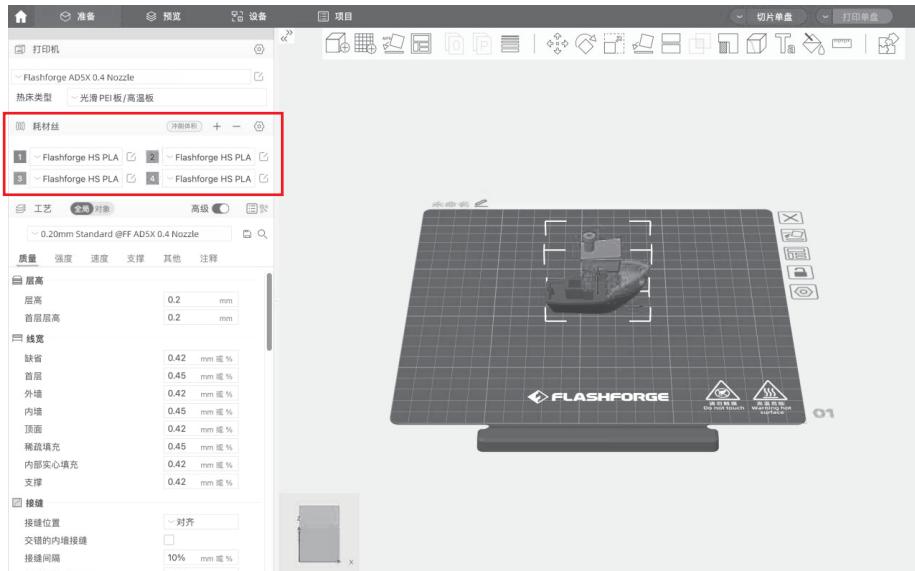

下载Orca-Flashforge：

<https://flashforge.com/blogs/download-software/software>

使用您的闪铸账号登陆 Orca-Flashforge。新建或者打开一个项目。

*Orca-Flashforge 和 Flash Maker 使用同一个账号。
